

# Preserve The Talk

Hackathon - ICTs for Indigenous Languages

Team name :- aditya6210\_2831

# Idea

The main idea or aim behind this project is to preserve and create a centralized online database of different indigenous languages of India. And we are going to do this by scraping data from reliable sources such as books, dictionaries, etc. We will extract the meaning of the respective indigenous language concerning the Hindi and English language. This will not just preserve the language but also encourage our Hindi and English speaking people to learn new languages.

# Features

01

We have created a website with the help of Wix.com as a prototype to showcase what we are looking for.

02

Remember, this website is just a prototype and the final one will have more features such as a search box for every table, language quizzes, etc

03

Our next step will be to move at the world level. Preserve and disseminate the indigenous languages of the word.

# Future

Till this submission, we have successfully scraped three indigenous languages from different reliable online sources. We know this number is not much impressive but we are more than happy to say that we are in the right direction. All we need is professional guidance to achieve our goal i.e. to preserve indigenous languages.
